

WIM3.5 INTEGRATOR

CONTROL
SYSTEMS TECHNOLOGY

THE BELT WEIGHING SPECIALISTS

IMPROVED VISIBILITY. SIMPLIFIED DATA MANAGEMENT.

The WIM3.5 Integrator is your all-in-one bulk material handling control centre. CST's WIM integrator series unifies belt weighers, bin scales and volumetric scanners to give real-time visibility of mass, volume and density.

By centralising data, it simplifies analysis, boosts safety, prevents overfilling and streamlines operations for maximum efficiency and control.

WHAT WIM3.5 BRINGS TO YOUR OPERATION

The WIM3.5 delivers the same comprehensive visibility and control that operations rely on from the WIM3, while making critical information easier to access and manage. By bringing weighing, inventory and material movement data together in one location, operators can monitor performance more effectively and make confident decisions based on real-time information.

FASTER, MORE INFORMED DECISIONS

Clear visibility of mass, volume and density data helps operators quickly identify trends, monitor inventory levels and respond to changing operational conditions before they impact productivity.

IMPROVED PROCESS CONTROL

Continuous monitoring supports better management of material movement across the operation, helping reduce the risk of overfilling, spillage and unplanned process interruptions.

REDUCED MANUAL INTERVENTION

Real-time access to system information reduces the need for routine manual checks, allowing personnel to focus on higher-value operational activities while maintaining visibility of critical processes.

ENHANCED SAFETY

Providing operational data from a centralised interface reduces the requirement for unnecessary field inspections and supports safer operational practices across the site.

GREATER EFFICIENCY THROUGH BETTER DATA ACCESS

With simplified data management and easier access to system information, operators can spend less time retrieving data and more time acting on it, improving overall operational efficiency.

ACCURACY GUARANTEED

KEY UPGRADES

Building on the proven WIM3 platform, the WIM3.5 Integrator introduces several hardware and usability improvements designed to make day-to-day operation simpler and more effective in the field.

LARGE 10" DISPLAY

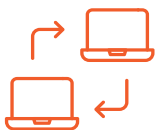

The WIM3.5 features a larger 10" display, providing operators with a clearer view of weighing and process information. The increased screen size improves readability and allows key operational data to be viewed more easily at a glance.

BRIGHTER SCREEN FOR FIELD CONDITIONS

Screen brightness has increased from 700 cd/m² to 1,000 cd/m², improving visibility in challenging site environments and helping operators access critical information more comfortably throughout the day.

SIMPLIFIED DATA TRANSFER

USB functionality now replaces external SD cards for data dumps and log transfers. This streamlines routine data management tasks and provides a more convenient method for accessing system information, exporting logs and performing updates.

IMPROVED ON-SITE USABILITY

The combination of a larger display, enhanced visibility and simplified data handling provides a more intuitive user experience, reducing the effort required to access and manage operational data.

Talk to CST about upgrading to WIM3.5 and improving visibility across your bulk material handling operations.

CONTACT US TODAY

Ask us how our innovative weighing solutions can optimise and enhance your bulk material handling operations, and learn more about how we engineer performance into every application!
